OBJECTIVE

Front End Developer with the ability to adapt to both self-starting and collaborative environments while staying focused on achieving high-quality results under strict deadlines. Student of Bachelor in CSE and worked and learned through a good fair amount hours of Bootcamp structure, learning JavaScript, TypeScript, Next.JS, Mongoose, Node.JS, React.JS, Git Hub, HTML, CSS, Tailwind, Bootstrap, and many more. Eager to tackle web development/design challenges to achieve lasting impacts on user experience.

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Python.
- **Scripting Languages:** JavaScript.
- **Database:** MongoDB, MySQL.
- **Web:** Tailwind CSS, Bootstrap.
- **Familiar:** Node JS, Express JS, Context API, React JS, Next JS, TypeScript, Daisy UI, Flowbite, Material UI.
- **Tools:** Git, Github, VS Code, Chrome dev tool, Firebase, Figma, Xampp.
- **Security Area:** Metasploit, Open Source OWASP Tools.

WORKING EXPERIENCE

Leader 10-07-2022 – 09-09-2022  [Letter of Recommendation](#)

Endgame Programmed sub-Intern, Programming Hero

- Led a team of sub-interns in an Endgame project, guiding them towards successful project completion.
- Demonstrated strong leadership skills by providing direction, motivation, and support to team members.
- Effectively managed and allocated tasks, ensuring efficient workflow and adherence to project timelines.
- Fostered a collaborative and positive team environment, encouraging open communication and knowledge sharing.
- Monitored project progress and reported updates to higher-level management or stakeholders.
- Also won the Letter of Recommendation & Best Outstanding Leader of the Team.

PERSONAL PROJECT

1. Event Planning & Management System [Live-site](#) [GitHub](#)

The web application serves as a comprehensive solution for organizing and managing various types of events, such as conferences, workshops, weddings, or parties. Overall, the Event Planning & Management System is a web application that streamlines the process of organizing and managing events, providing users with an efficient and convenient platform to plan, promote, and execute successful events.

Key Features

- Event creation: Users can create and customize event details, such as the event name, date, time, location, and description.
- Communication tools: Users can send event-related notifications and updates to attendees via email or messenger.
- Payment integration: The system may incorporate payment gateways to facilitate secure online transactions for Booking.
- We entice our attendees through image galleries, blogs, reviews, and much more. *Job opportunities. User can like comments share our blogs.
- There are three interfaces User, Employee, Admin. Admin Can handle Dashboard Event Paid or not and Post blogs and Event Gallery Post etc.
- Can't see service details without login. Because routes are protected by private routes.
- Login system implemented with social link as well as email password link.
- Users can see all services in the Home and Product section.

Technology Stack: The project may utilize a combination of front-end technologies like HTML, CSS, and TypeScripts, Tailwind, Daisy UI, React Query, react hook form, Firebase React hooks, Firebase Authentication, React Router Dom, React Icon, React Toastify, stripe JS, along with a back-end framework such as Node.js. It might also incorporate database technologies like MongoDB or Firebase for data storage and retrieval and JWT.

2. DRONE MANUFACTURE WEBSITE [Live-site](#) [GitHub](#)

The website serves as a central hub for drone enthusiasts, hobbyists, and potential buyers who are interested in exploring and purchasing dronekits. It aims to provide a comprehensive source of information about various drone models, features, and customization options.

Key Feature

- Product catalog: The website displays a catalog of drone models and kits, showcasing their specifications, features, and pricing.
- Customization options: Users can explore different customization options, such as selecting specific components or accessories to build their desired drone kits.
- Product reviews and ratings: The website may incorporate user reviews and ratings to help potential buyers make informed decisions.
- Payment integration: The system may incorporate payment gateways to facilitate secure online transactions for Drone Parts.
- Can't see service details without login. Because routes are protected by private routes.
- Login system implemented with social link as well as email password link.
- Users can see all services in the Home and Product section.

Technology Stack: The project may utilize front-end technologies such as HTML, CSS, and JavaScript, Tailwind, Daisy UI, React Query, react hook form, Firebase React hooks, Firebase Authentication, React Router Dom, React Icon, React Toastify, stripe JS for the website's user interface. It may also leverage back-end technologies like Node.js or Python for server-side logic. Additionally, the website may integrate with a database system, such as MongoDB or Firebase, to store and retrieve product information and user data.

EDUCATION

United International University – United City ,Dhaka – BACHELOR IN COMPUTER SCIENCE AND ENGINEERING

2019-Running
I Build a project's exceptional quality and successful implementation resulted in its recognition as the 1st runner up in the course work competition in our university. This accomplishment showcases the team's expertise in developing a dynamic club forum website that effectively serves the communication and collaboration needs of club members. The project aimed to develop a dynamic club forum website, providing a platform for club members to communicate, collaborate, and share information.
